

Tarek Zaki

Junior Front-End Developer (Angular)

zakitarek20@gmail.com • 01212771975 • Egypt • [linkedin.com/in/tarek-zaki](https://www.linkedin.com/in/tarek-zaki)

SUMMARY

Junior Front-End Developer with hands-on experience building and maintaining enterprise Angular applications in production. Experienced with Angular Signals, RxJS, Nx monorepos, and Jest, within Agile/Scrum workflows. Focused on writing maintainable code and improving application architecture through refactoring and code review.

EDUCATION

B.Sc. Computer and Data Science

Faculty of Computer and Data Science, Alexandria University • Graduated 2025 • Grade: 3.3 / 4.0

WORK EXPERIENCE

Junior Front-End Developer

Oct 2025 – Present

GAMP · IT Services & Software Development, Poland

- Delivered features and bug fixes across **GapMap (Portal)** and **PayStation**, a new kiosk-machine application added to the team's Nx Angular monorepo, working under senior review in an **Agile/Scrum** workflow with **Jira**
- Built the **Exhibitors feature** end-to-end — a listing page with search and filters, a details page, and a reusable fullscreen **Lightbox component** now reused elsewhere in the portal
- Diagnosed and fixed a state-management bug causing the partition map to get stuck in infinite loading when switching selling types, tracing it to an incorrect service-reset order
- Refactored existing components to use **Signals** and native **control flow (@if/@for)**, and resolved responsive-design issues across multiple views to improve layout consistency across screen sizes
- Refactored route-access logic across Auth and Portal guards into a single **config-driven service**, replacing duplicated, hard-to-maintain checks
- Wrote **unit tests with Jest** to validate component behavior and support the team's test coverage goals

PROJECTS

E-Commerce Front-End (Personal Project)

- Built a front-end e-commerce application using **Angular**, covering product listing, cart, and checkout flows
- Wrote **unit tests with Jest** to cover core components and logic
- Source code to be published on GitHub — link to be added once the repository is live

TECHNICAL SKILLS

Frontend Angular, TypeScript, JavaScript, HTML5, CSS3, SCSS, Angular Material, Bootstrap/Tailwind

Angular Signals, RxJS, Standalone Components, Routing, Route Guards

Testing Jest (unit testing)

Tools Nx Monorepo, REST API integration, Git, GitHub, GitLab

Practices Agile/Scrum, Jira, Code Review

Languages Arabic (native), English (Professional Working Proficiency)
