SUMMARY

Angular Front-End Developer with hands-on experience delivering production features in enterprise B2B environments — from building full Nx monorepo Angular applications to resolving critical state-management bugs and restructuring guard architecture. Experienced with Angular Signals, RxJS, Standalone Components, Jest, and Agile/Scrum workflows. Known for writing maintainable, well-tested code and taking features end-to-end from implementation to production.

WORK EXPERIENCE

Front-End Developer | GAMP · IT Services & Software Development, Poland

Oct 2025 – Jul 2026

- Shipped 20+ features across GapMap Portal and PayStation (new kiosk application) using TypeScript and Angular within an Nx monorepo, collaborating with the Poland-based team via Jira and GitLab in an Agile/Scrum workflow
 - Built Exhibitors feature end-to-end with Angular Material and Tailwind CSS — listing page with search and filters, details page, and a reusable Lightbox component now used in 3+ features across the Portal
 - Resolved 20+ bugs reported by QA across GapMap Portal, including a critical RxJS state-management issue causing infinite loading in the partition map — traced to an incorrect service-reset order and eliminated as a production blocker
 - Refactored 15+ components to Angular Signals, Standalone Components, and native control flow (@if/@for), adding Reactive Forms validation, Route Guards for access control, OnPush change detection to cut unnecessary re-renders, and route-level Lazy Loading to shrink the initial bundle
 - Consolidated duplicated Auth/Portal guard logic into a single config-driven TypeScript service, eliminating 8+ duplicate checks and simplifying future maintenance
 - Fixed responsive-design issues across 5 views using CSS3 and Tailwind CSS with BEM naming conventions, ensuring consistent layouts across mobile, tablet, and desktop viewports
 - Wrote Jest unit tests across components, services, guards, and HTTP Interceptors, helping the team consistently hit its sprint coverage targets
-

PROJECTS

Angular E-Commerce Platform (Nx Monorepo) | [Live Demo](#)

- Built a full-featured e-commerce application structured as an Nx monorepo across 16 feature and shared libraries, implementing authentication (JWT, functional Route Guards), product browsing with URL-synced search/sort/pagination/filters, cart, checkout, and order history
- Achieved 84% statement coverage with Jest across 38 test suites (93 tests), covering components, services, guards, validators, and HTTP Interceptors
- Integrated the REST API using typed TypeScript services and HTTP Interceptors, and structured the app with Angular Signals, Standalone Components, Reactive Forms, and Lazy Loading

EDUCATION

B.Sc. Computer and Data Science

Graduated 2025

Faculty of Computer and Data Science, Alexandria University • GPA: 3.3 / 4.0

TECHNICAL SKILLS

Frontend	Angular (Signals, Standalone Components, Reactive Forms, Route Guards, HTTP Interceptors), Change Detection Optimization (OnPush Strategy), Lazy Loading (feature routes), RxJS, TypeScript, Angular Material, Tailwind CSS (BEM methodology)
Testing	Jest, Unit Testing
Tools	Nx Monorepo, Git, GitHub, GitLab, Responsive Design, Agile/Scrum, Jira
Languages (code)	TypeScript, JavaScript, HTML5, CSS3
Languages (spoken)	Arabic (native), English (professional)
