

Tarek Zaki

Front-End Developer (Angular)

zakitarek20@gmail.com • 01212771975 • Alexandria, Egypt • [linkedin.com/in/tarek-zaki](https://www.linkedin.com/in/tarek-zaki) • [tarikzaki.github.io](https://github.com/tarikzaki)

SUMMARY

Front-End Developer with hands-on experience building and maintaining enterprise Angular applications in production. Experienced with Angular Signals, RxJS, Nx monorepos, and Jest, within Agile/Scrum workflows. Focused on writing maintainable code and improving application architecture through refactoring and code review.

EDUCATION

B.Sc. Computer and Data Science

Faculty of Computer and Data Science, Alexandria University • Graduated 2025 • Grade: 3.3 / 4.0

WORK EXPERIENCE

Front-End Developer

Oct 2025 – Present

GAMP · IT Services & Software Development, Poland

- Delivered features and bug fixes across **GapMap (Portal)** and **PayStation**, a new kiosk-machine application added to the team's Nx Angular monorepo, working under senior review in an **Agile/Scrum** workflow with **Jira** while collaborating remotely with the team in Poland
- Built the **Exhibitors feature** end-to-end — a listing page with search and filters, a details page, and a reusable fullscreen **Lightbox component** now reused elsewhere in the portal
- Diagnosed and fixed a state-management bug causing the partition map to get stuck in infinite loading when switching selling types, tracing it to an incorrect service-reset order
- Refactored existing components to use **Signals** and native **control flow (@if/@for)**, and resolved responsive-design issues across multiple views to improve layout consistency across screen sizes
- Refactored route-access logic across Auth and Portal guards into a single **config-driven service**, replacing duplicated, hard-to-maintain checks
- Wrote **unit tests with Jest** to validate component behavior and support the team's test coverage goals

PROJECTS

Angular E-Commerce (Nx Monorepo)

[Live Demo](#) • [GitHub](#)

- Built a full-featured e-commerce app with **Angular 20** (standalone components, Signals, lazy-loaded routes, **@if/@for** control flow), structured as an **Nx monorepo** across 16 feature and shared libraries
- Implemented authentication (JWT, functional route guards), product browsing with search/sort/pagination/filters synced to URL query params, cart, checkout, and order history — integrated with a REST API via typed services and **HTTP interceptors**
- Reached **84% statement coverage** with **Jest** across 38 test suites and 93 tests, covering components, services, guards, validators, and interceptors

TECHNICAL SKILLS

Frontend Angular, TypeScript, JavaScript, HTML5, CSS3, SCSS, Angular Material, Bootstrap/Tailwind

Angular Signals, RxJS, Standalone Components, Reactive Forms, Routing, Route Guards, HTTP Interceptors, JWT Authentication, State Management, Lazy Loading, Control Flow (@if/@for)

Testing Jest, Unit Testing

Tools Nx Monorepo, REST API Integration, Git, GitHub, GitLab

Practices SPA Development, Responsive Design, Agile/Scrum, Jira, Code Review, Remote Collaboration

Languages Arabic (native), English (Professional Working Proficiency)
